Dear Patient,

At Lexicon, we want to assure you that nothing is more important than protecting your health and well-being. Practicing social distancing can make it challenging to leave your home for the treatment you need. We are providing you with important information on XERMELO.

**XERMELO can help you take control.** XERMELO is a prescription pill, used along with somatostatin analog (SSA) therapy, for Carcinoid Syndrome Diarrhea in adults who are not adequately controlled by SSA therapy. XERMELO reduces Carcinoid Syndrome Diarrhea episodes. Additionally, XERMELO is an oral medication that can be delivered right to your door, meaning you don’t need to leave your home.

Controlling your Carcinoid Syndrome Diarrhea is especially important, since it is associated with various health issues that may affect your overall health. Interested in learning more? Our Lexicon Nurses are available to answer any questions or concerns you may have during this stressful time.

Sincerely,

Your XERMELO Team

**IMPORTANT FACTS**

**XERMELO (zer-mel-o) (telotristat ethyl) tablets**

These Important Facts do not take the place of talking with your healthcare provider about your condition or treatment. If you have any questions about XERMELO, ask your healthcare provider.

**What is XERMELO?**

XERMELO is a prescription pill, used along with somatostatin analog (SSA) therapy, for Carcinoid Syndrome Diarrhea in adults who are not adequately controlled by SSA therapy. XERMELO has not been studied in children under 18 years of age.

**What should I discuss with my healthcare provider before starting XERMELO?**

Since XERMELO may interact with other medications you may be taking, you should show your healthcare provider a list of all the medicines you are taking before starting XERMELO.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

**How should I take XERMELO?**

Take XERMELO exactly as prescribed by your healthcare provider. Do not change your dose or stop taking XERMELO without talking to your healthcare provider.

- Take XERMELO 3 times a day with meals. XERMELO should be taken with a meal, not a snack.
- If a dose is missed, take the next dose at the regular time. Do not take 2 doses at the same time to make up for a missed dose.
- If you are administering a rescue shot (short-acting octreotide) in combination with XERMELO, administer the rescue shot at least 30 minutes after taking XERMELO.

**What are the possible side effects of XERMELO?**

XERMELO can cause serious side effects. These serious side effects include:

- Constipation: XERMELO may cause constipation which can be serious. You should tell your doctor and stop taking XERMELO if severe constipation or severe, persistent, or worsening abdominal pain develops.

**What are the most common side effects of XERMELO?**

- Nausea
- Headache
- Increase in certain liver enzymes (gamma-glutamyltransferase [GGT])
- Depression
- Gas (flatulence)
- Decreased appetite
- Swelling of hands and feet
- Fever (pyrexia)

**How should I store XERMELO?**

- Store XERMELO at room temperature.
- Do not keep medicine that is out of date or that you no longer need.
- Keep XERMELO and all medicines out of the reach of children. Properly dispose of unused XERMELO.

**General Information about XERMELO:**

Do not use XERMELO for a condition for which it was not prescribed. Do not give XERMELO to other people, even if they have the same problem you have.

The risk information provided here is not comprehensive. To learn more, talk about XERMELO with your healthcare provider. The FDA-approved product labeling can be found at www.XERMELO.com or by calling 1.844.LexPhar (1.844.539.7427).
